Transformation of office space with Technology

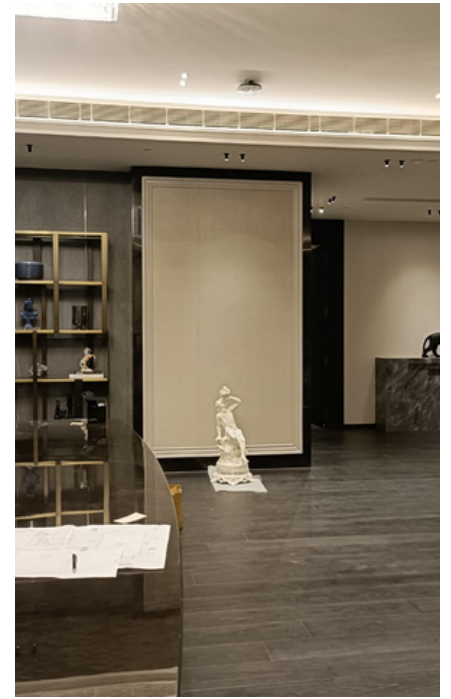

Office ambience has always been one of the company's major priorities. A well-designed, easy-on-the-eyes office always wins brownie points from both employees and visitors from outside. Every single fixture in your office must be functional and must also help enhance the beauty of your workspace. Even your homes deserve a good aesthetic appeal.

At Anusha Group, we provide you with the right solutions and ensure that your space attracts all eyes. Recently, we took on a project to renovate and upgrade one of India's most high-end and noteworthy offices, the Serum Institute of India. The company is headquartered in Pune's Mundhwa locality and has gained prominence for its work on the Covishield vaccine.

The office houses 13 floors with a carpet area of approximately 3,20,000 sq ft. Anusha Group was called in to work on the ground floor as well as the second floor, using our Lutron collection of lighting controls and shades, respectively.

On the ground floor, we installed Lutron's customized rollers, which helped prevent excess sunlight from invading the office. The beauty of these shades is that they have more than 27 feet of height, and while it is heavy to manage motorized roller shades of such height, it can be done with proprietary cable-driven shades.

More Info

- They help save energy.
- They have one of the most tranquil motors in the industry.
- Their operation is pretty smooth and convenient, and they also add an elegant look and feel to the workspace.
- They also reduce the glare entering the office, as well as protecting the furnishings on the premises.

Additionally, we put our International Touch Keypad at the ground-floor reception, allowing users to adjust the office's ambience with the touch of a single button while simultaneously reducing their exposure to glare.

On the second floor, Anusha Group helped renovate the chairman's office and bedroom, as well as the office of the managing director and the boardroom. The areas have been fitted with palladium keypads to control the draperies and rollers, providing a complete blackout from the sunlight when necessary. We also mounted Dual Pedestal keypads on the tables to help control the lights and shades from the sofa itself, along with a wall-mounted Pico Wireless in the chairman's washroom cubicle to set the lights.

The Athena processor controls every light and shade in the floors, as well as their motors, with the touch of a button, making all of these items and fixtures incredibly easy to use.

This project serves as our personal benchmark for office renovations. This Vision of the Architect/S MOCO Design, Pune. We were successful in providing amazingly efficient services while at the same time not compromising on the aesthetic and product quality. We brought functionality through technology and covariance to our client and helped create an efficient workforce as well.
