Lighting control supplied & commissioned by

Alok Hada

The three BHK apartment with a basement with modern amenities has been constructed in an affluent area of South Delhi. Spread across two floors (ground and basement) over approx. 4000 sq.ft.

Dr. Chandna's Residence belongs to Dr. Jasbir Chandna who is a reputed Gynecologist. Anusha Technovision Pvt. Ltd. has played the virtual role by installing the lighting controls, motorized shades, speakers, step-up of Home Theatre and everything can be controlled via iPad. The lighting control system installed in this residence creates the ability for home's lighting to be controlled together. The home security systems were enhanced by controlling the lights during an alarm situation, turning on to full brightness inside the home and flashing outside to quickly identify the troubled home for authorities. Built-in time-clock has been installed which allows all of the home lighting to be automatically controlled and simulate occupancy while anyone is away, deterring potential intruders.
